OBJECTIVE: I am a self-taught mobile app developer. Currently seeking a position in Software Development, proficient in Java, Android Studio, XML, OOP, and Firebase Database.

EXPERIENCE

@HTDWPS — *Mobile Application Developer*   *[2015 - Present]*
- Designed and programmed websites for clients using Bootstrap, HTML and CSS media queries. Tested websites against multiple layouts, screen sizes, and devices.
- Created my personal project WorkRant, which is a Reddit-like forum Android application, linked to a Firebase database backend, that stores user profiles, threads, and messages.
- Mockup UI layouts, and user flow diagrams for applications and implemented Google's Material Design language during the application design process.
- Self published applications using Android Framework using Android best practices.

@Harry Tran Designs — *Digital Marketing Campaign Analyst*   *[2010 - Present]*
- Planned and implemented advertising campaigns for clients through social media ad network, measuring performance metrics to drive quality leads to the clients' sales funnel.
- Developed landing pages using HTML5 & CSS3 tailored to a client's product benefits and carry the marketing message across the sales channel. Setting up analytics on landing pages, set tracking, and writing copy text.

SKILLS

Languages: Java, Swift, HTML5, CSS3, Javascript, JQuery, Lua
